# Ricordiamo che AdriaClim è un progetto strategico INTERREG IT-HR

Strategic theme: 2 - Climate change adaptation

Specific objective: 2.1 - Improve the climate change monitoring and planning of adaptation measures tackling specific effects, in the cooperation area

S.O. 2.1

Project acronym	AdriaClim
Project title	Climate change information, monitoring and management tools for adaptation strategies in Adriatic coastal areas
Start date	01/01/2020
End date	31/12/2022

# Un richiamo sui risultati progettuali attesi

## Project results

AdriaClim will improve the knowledge on climate change and it will achieve the following results:

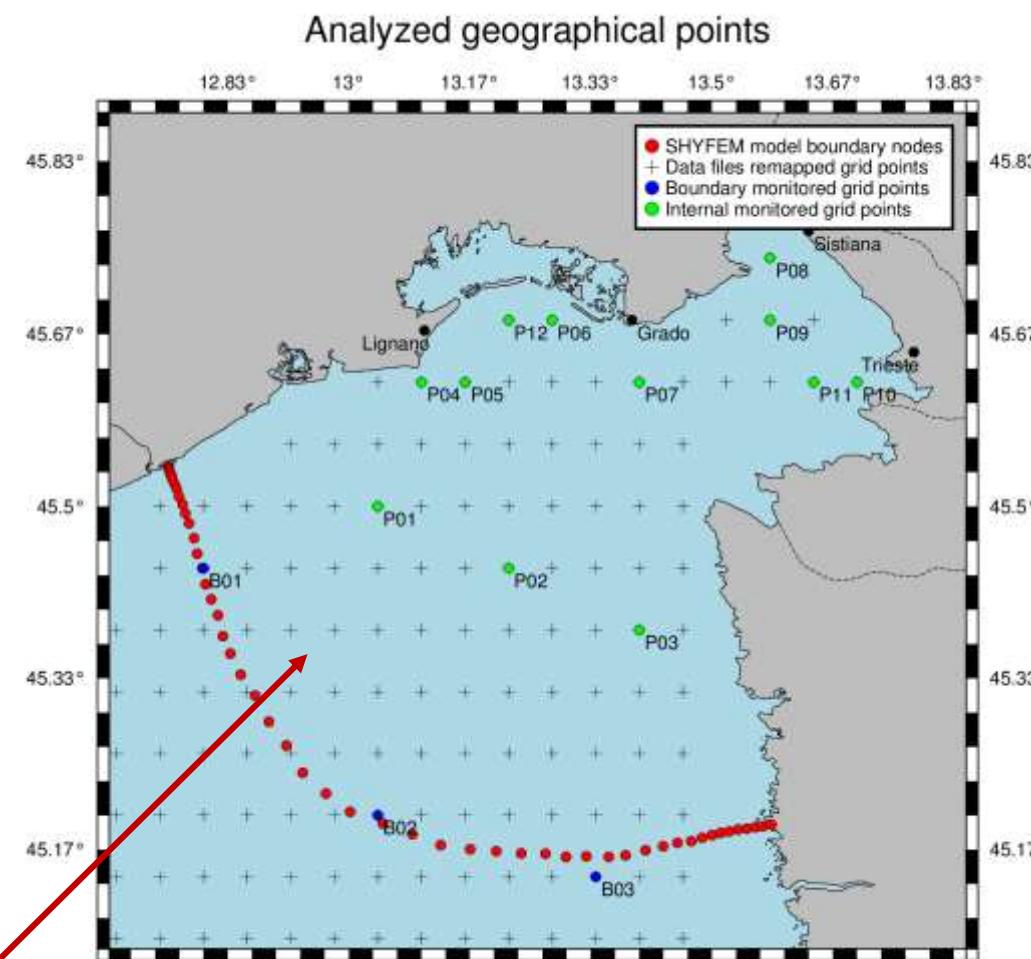

- To **improve and harmonize the access to observing and modelling tools and products** (data platform, distributed database, innovative access tools) by setting up crossborder methodologies/protocols;
- To **set up new and improve existing regional and coastal high-resolution integrated meteo-hydro-ocean and ecological climate monitoring systems (observations and models)**. 7 integrated monitoring systems each focusing of different variables will be put in place dealing with different typologies of data: sea level, temperature, salinity, sediment, carbon, nutrients, ecosystem variables, atmospheric and ocean variables
- To **assess the impacts, vulnerability and risks and develop maps and indexes for pilot case studies** on the blue economy (aquaculture, tourism); marine ecosystems services by Marine Protected Areas (MPA); coastal towns (population), and ports.
- To **design adaptation plans** (at least 3 in IT and 2 in HR) at different scale (e.g. local and regional) to be adopted by the relevant authorities in coastal territories
- To **organize workshops** to present future climate conditions and impacts
- To **organize trainings for public and private stakeholders** on adaptation measures, governance systems, monitoring of the actions, for the creation of new jobs in the field of adaptation and mitigation.
- To **set up a Transnational Expert Management Body (TEMB)**
